Version 4.1.0, released on May 29, 2014

Abstract

The fontawesome package grants access to 439 web-related icons provided by the included *Font Awesome* free font, designed by Dave Gandy and released¹ under the open SIL Open Font License².

This package requires the fontspec package and either the X_ƎL^AT_EX or Lua(L^A)T_EX engine to load the included otf font.

1 Introduction

It is a redistribution of the free (as in beer) *Font Awesome* otf font with specific bindings for L^AT_EX.

2 Requirements

The fontawesome package requires the fontspec package and either the X_ƎL^AT_EX or Lua(L^A)T_EX engine to load the included otf font.

3 Usage

`\faicon` Once the fontawesome package loaded, icons can be accessed through the general `\faicon`, which takes as mandatory argument the *⟨name⟩* of the desired icon, or through a direct command specific to each icon. The full list of icon designs, names and direct commands are showcased next.
